

Compact StopCock | small, but wow!

NEW

Optimised discharge for even flow

The space-saving Compact set fits in every rack or refrigerators

Space-saving Compact set: Space-saving Flachmann canister and Compact stop cock

- ▶ Space-saving
- ▶ Tight-closing
- ▶ Outstanding chemical resistance
- ▶ Always vertical position of stop cock

The Compact stop cock for canisters and barrels features an impressive compact design. This makes the stop cock ideal for use in refrigerators and on racks, etc. The short discharge does not protrude out over the lower edge of the container, which makes the stop cock a perfect choice even when space is very limited.

The specially optimised design of the discharge forms an even stream of liquid with no splashing or spattering.

The stop cock features easy motion and a tight seal. It is screwed on with a connecting union nut. This guarantees a vertical position of the stop cock and makes it possible to adjust the stop cock subsequently.

The Compact stop cock fits all containers with R 3/4" connecting threads.

PP, PE and PTFE are materials that offer outstanding chemical resistance to acids and bases.

The Compact stop cock is the ideal addition to Flachmann space-saving canisters – for perfect storage and filling when space is at a premium!

And the space saving Compact set is available immediately at an especially attractive price.
